50 Elementos Quimicos: Que Son y Que Representan (Guia Breve)

Lecturer Department of Chemistry and Biochemistry Eric Scerri

50 Elementos Quimicos: Que Son y Que Representan (Guia Breve) Lecturer Department of Chemistry and Biochemistry Eric Scerri

The chemical elements are the building blocks of life, but could you discuss the periodic table over the dinner table? Which elements put the blue into blu-ray and the lime into limelight? And do you know enough about antimony, arsenic, and aluminum to illuminate the bar with your elemental knowledge? This book presents the foundations of chemical knowledge, distilling the 50 most significant chemical elements into individual entries, each of 300 words and one picture. Divided into seven chapters, this volume includes the atomic details of the other 68 elements and the relationships of all 118, as well as biographies of the chemists who transformed scientific knowledge and unlocked the mysteries of life itself. Illustrated with explosive graphics, this book is the quickest way to know your arsenic from your europium.
